

Simple Theme Plugin

Plugin Information

View Simple Theme on the [plugin site](#) for more information.

This plugin allows to customize Jenkin's appearance with custom CSS and JavaScript. It also allows to replace the Favicon.

Features

- Use your own CSS.
- Use your own JavaScript.
- Replace the Jenkins Favicon.

Setup

Go to "Manage Jenkins" > "Configure System" > "Theme" - there are settings to define the theme: You can specify URLs for CSS, JavaScript and Favicon. Additionally, you can add simple CSS rules right here.

Examples/Themes

Some ready-made themes can be found on GitHub, these can also serve as examples for fully customizing the Jenkins appearance:

- ["Atlassian"](#)
- [Doony](#)
- [Isotope11](#)
- [Material](#)
- [Neo2](#)
- [Rackspace Canon](#)
- and probably several more... (feel free to add)

Version History

Version 0.5.1 (30 August, 2018)

- [JENKINS-53327](#): Fix Inclusion of extra CSS
- Don't migrate empty fields

Version 0.5 (26 August, 2018)

- New configuration layout: Allow an arbitrary number of theme elements (Old configuration should be migrated automatically, but a downgrade WILL loose settings)
- Supports Configuration-as-Code
- DEV: Support incrementals
- DEV: Code is forced into Google Code Style

Version 0.4 (12 February, 2018)

- New feature: Set favicon, contributed by Taiki Sugawara
- New feature: Allow specifying simple CSS rules right on the settings page
- Initial translation support (for all 4 strings)
- Parent update, minor cleanups
- Added CI builds and a simple test
- Don't apply the theme on pages generated by the [Build Monitor Plugin](#)

Version 0.3 (5 March, 2013)

- Simple bump of parent version so that the plugin correctly identifies as a Jenkins plugin for people using custom update centers

Version 0.2 (29 July, 2011)

- Initial release
