

DryRun Plugin

Plugin Information

View Dry Run [on the plugin site](#) for more information.

This plug-in makes it possible to show all the job tasks (builders, publishers, ...) to be executed as part of a build job.

Features

This plugin enables you to run your job in a dry-run mode.

If build step are dry-run aware (implements DryRun extension point), the dry-run execution is delegated to the build step.

At the moment, the [Gradle Plugin](#) and the [xUnit Plugin](#) provide the dry-run feature.

And we strongly recommend other plugins to implement the DryRun extension point.

Changelog

0.9

* Fix [JENKINS-15171](#) - The run button must respect the configured rights

0.8

* Add a default Jenkins Result as SUCCESS for plugin using dry-un

0.7

* Fix dry-run builders

0.6

* Add a job property (Enable to choice different types of dry-run for the the job: runlisteners, buildwrappers, builders, ...)

0.5

* Remove the dry-run for the maven job type (the maven job type Jenkins implementation is not suitable for a well dry-run)

0.4

* Added dry-run for publishers

0.3

* Added a badge action to the build history

0.2

* Delegate dry-un to the build step if the build step extends DryRun extension point.

0.1

* Initial version
