

Embeddable Build Status Plugin

Plugin Information

View embeddable-build-status on the plugin site for more information.

This plugin allows Jenkins to expose the current status of your build as an image icon badge via a fixed URL. You can put this URL into other sites (such as GitHub README) so that people can see the current state of the job (last build) or for a specific build.

Basic Usage

Once this plugin is installed, you'll see **Embeddable Build Status Icon** as one of items in the left menu navigation for a job or build of a job respectively.

When you click this icon, you get several links to an icon that shows the current Build Status for your job or the status of a specific build respectively.

You can paste any of these URLs in other sites so people can see the current state of your build.
