

Storable Configs Plugin

Plugin Information

View Storable Configs on the plugin site for more information.

This plugin allows you to save and load set of job parameters.

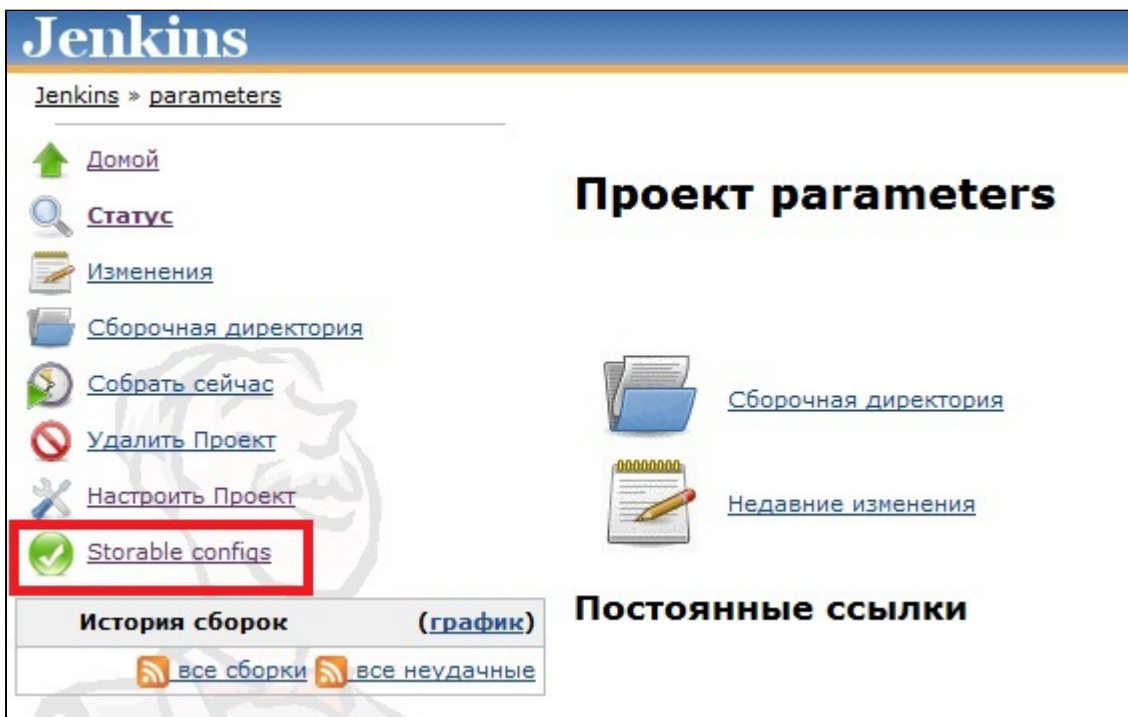

Hudson 1.366 or later.

This plugin was created for Hudson 1.366. It might not work with earlier versions of Hudson.

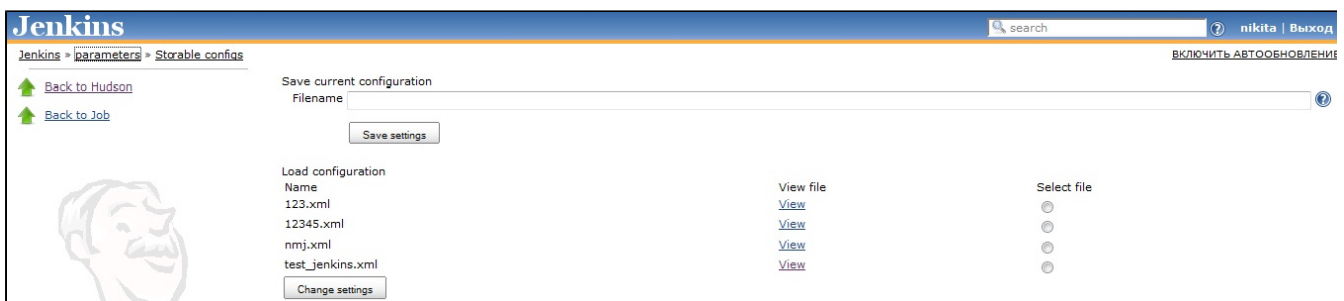

User guide

This plugin saves and loads job parameters (Boolean value, String parameter, `ScriptSelectionTaskDefinition` and etc.).

1. Select job. In menu there is button "Storable configs". Press this button.

2. You should see the following page with empty configuration list.

3. For saving current job parameters you need to enter the filename and to press "Save settings" button. Plugin will save all job parameters in `HUDSON_HOME\jobs\job_name\storable-configs\filename.xml`. This file will appear in "Load configuration" section. You may view all available configuration files.

4. For loading parameters you need to choose one file from the list and to press "Change settings" button.

Changelog

Version 1.0 (February 28, 2011)

- Initial release.
