

Stride Notification Plugin

Jenkins plugin that sends notifications to Stride chat rooms for build events.

Features

- Can send notifications for the following build statuses
- Build Number
- Build Status(e.g. build success , build failure ,build unstable)
- Build URL
- Build Duration
- Job Name

Configuration

The plugin allows only a single level of configuration .it listed below

Job level configuration

To set up the plugin for an individual job, go to the job's configuration page and add the **Stride Notifications** post-build action. The settings listed there are:

- **Access Token:** It is the unique token for specific stride chat room where the notification message intend to send .Just copy it and paste it here .
- **Url:** It's the Rest Url of Specific stride chat room , just copy the whole URL and paste it here

How to generate Access token and Url

Go to stride chat room and click on the Apps on the right side ,then click add button it will display different applications from that choose connect your app it prompts a window of custom app , specify a token under API tokens label and press the create button . Then you can see that token is created ..

- Copy that access token and paste it on the access token field in the Jenkins job configuration page
- Copy the whole URL and paste it on the URL field in the Jenkins job configuration page
