

XL Release Plugin

Plugin Information

View Xebialabs XL Release [on the plugin site](#) for more information.

The XL Release Plugin allows Jenkins to create and optionally trigger releases in Xebialabs XL Release by adding one post-build action to your Jenkins installation:

- Release with XL Release

If instead you are looking to trigger Jenkins from XL Release, you want to look at the XL Release Jenkins task: <https://docs.xebialabs.com/xl-release/how-to/create-a-jenkins-task.html>

Requirements

- XL Release 4.5.0 or later
- Java 1.7 or later

For older versions of XL Release, use [Jenkins plugin version 4.0.11](#).

Features

- Start the release process in XL Release
- Load a release template from XL Release
- Provide input for release variables
- Use Jenkins credentials plugin

For information about configuring and using the plugin, as well as release notes, visit the [Xebialabs documentation site](#).
