

Login Theme Plugin

Plugin Information

View Login Theme on the [plugin site](#) for more information.

This plugin allows extending and overriding the default theme used on the login and signup pages since Jenkins 2.128.

After installation, its settings are available in *Manage Jenkins » Configure System » Login Page Theme*

Two modes are supported and controlled by the option *Use default theme*: If checked, it will extend the default theme with additional content; otherwise, it will replace it entirely.

See the related [announcement blog post for the new 2.128 login theme](#) for technical background.

Potentially Unsafe

In *very rare* configurations (those distinguishing between Overall/Administer and Overall/RunScripts, and not allowing administrators to configure the Markup Formatter), this functionality could amount to a potential security issue. Only install this plugin, or make it available for installation, if you trust all your Jenkins administrators not to abuse these options.

Changelog

1.0 (2018-07-06)

- Initial release
