

Pipeline Stage Step Plugin

Plugin Information

View Pipeline: Stage Step on the plugin site for more information.

Adds the Pipeline step 'stage' to delineate portions of a build. A component of [Pipeline Plugin](#).

Changelog

2.3 (Nov 2, 2017)

- [JENKINS-44456](#) - Expose stage name as an environment variable.

2.2 (Aug 30, 2016)

- [JENKINS-26107](#) `stage` now takes a block argument; the old syntax, interspersed with other statements, is deprecated.
 - You must also update the [Pipeline Stage View Plugin](#) to 2.0+ to see block-syntax stages at all. Nested stages are currently displayed linearly.
 - The `concurrency` parameter is also deprecated; use `lock` from the [Lockable Resources Plugin](#), and/or `milestone` from the [Pipeline Milestone Step Plugin](#).

2.1 (May 03, 2016)

- Now preventing `stage` from being used inside a `parallel` branch, which was never supported.
- Downgrading an assertion error to a warning.

2.0 (Apr 05, 2016)

- First release under per-plugin versioning scheme. See [1.x changelog](#) for earlier releases.
- Includes the `stage` step formerly in [Pipeline Supporting APIs Plugin](#).
