

# jobtemplates Plugin

Allows you to create new jobs from templates.

## Plugin Information

View [jobtemplates on the plugin site](#) for more information.

This plugin provides a new link ("New Job From Template") in the sidepanel of the Jenkins overview page, which leads you to another page where you can set a name for the new job as well as choose from several self-defined templates. (You can define these templates by creating jobs with a name that starts with "Template\_".) The new job then gets created as a copy of the selected template.

## Changelog

### Version 1.0 (Sep 26 2013)

- First version of this plugin
