Highlighting of Warnings

The actual warning is visualized in the source code view (with syntax highlighting). When hovering over a colored warning annotation, then the warning message and detailed description is shown in a tool tip.

```
90         int line;  
91         List<IProblem> list = new ArrayList<IProblem>();  
92         IProblem problem;  
93         for (int i = 0; i < 5; i++) {  
94             line = 10 + i;  
95         }  
96         return observableProblemsList;  
97     }  
98     /** {@inheritDoc} */  
99     public void updateTasks(final IFile file) {  
100         try {  
101             // ...  
102         }  
103     }  
104 }
```

'5' sollte durch eine Konstante definiert sein.
Checks that there are no "magic numbers", where a magic number is a numeric literal that is not defined as a constant. By default, -2 are not considered to be magic numbers.
