

ChromeDriver plugin

Plugin Information

View chromedriver [on the plugin site](#) for more information.

This plugin auto-installs [ChromeDriver](#) to every slave. This is useful if you run Selenium tests on your Jenkins by using Google Chrome, which requires this separate platform-specific binary to be downloaded and available.

This plugin does not have any configuration. It will automatically kick in when a slave becomes online.

Changelog

Version 1.0 (Dec 21, 2011)

- Initial version.
