

# HockeyApp Plugin

## Plugin Information

View HockeyApp on the [plugin site](#) for more information.

Lets you publish Android, iOS, and Mac apps to [HockeyApp](#) (or enterprise instance) from a Jenkins build.

## Notes

For more information on the hockeyapp.net HTTP API please see <http://support.hockeyapp.net/kb/api>  
Forked from <https://github.com/jenkinsci/testflight-plugin>

## Changelog

### Upcoming features

#### Version 1.4.0 (25th November 2018)

- **The minimum required version of Jenkins that this plugin depends is Jenkins 2.73.3**
- Adding ability to get changelogs for Multibranch Pipeline (#54 - thanks Frank Ziegler)
- [JENKINS-54498] version creation databoundconstructor regression (#56)
- Clean up global configuration section (#57)
- [JENKINS-54576] Pipeline baseurlholder should be optional (#58)
- **The pipeline API will change slightly with respect to the custom baseUrl property.** If you receive the following error message:

```
Invalid parameter "baseUrlHolder", did you mean "baseUrl"
```

You will need to change your pipeline from:

```
baseUrlHolder: [baseUrl: 'https://your.custom.url']
```

To:

```
baseUrl: 'https://your.custom.url'
```

#### Version 1.3.3 (7th October 2018)

- Rearrange POM to reflect active maintainers (#55)
- Add logging of hockeyapp resultant urls, in addition to the build page links. (#43 - thanks Anne Moroney)

#### Version 1.3.2 (26st September 2018)

- Fix a reversion of #46 from #42 (#53 - thanks Douglas Knudsen)

#### Version 1.3.1 (23rd September 2018)

- Add support for uploading multiple builds to the same version (#52 - thanks Karl Beier)
- [JENKINS-33310] - Support setting HOCKEYAPP\_INSTALL\_URL for Pipelines (#46 - thanks Anna Tikhonova and Douglas Knudsen)
- [JENKINS-22657] - Plugin respects Jenkins proxy settings (#42 - thanks Martin Lederer)

#### Version 1.3.0 (23rd June 2018)

- Add initial testing support (#44 - thanks Simon St John-Green)
- Add symbols to extension points (#50)
- [JENKINS-51982] - Do not create install URL (#51)

As of this release you can write pipelines with a friendlier syntax (checkout the full capability in the pipeline syntax builder):

```
hockeyApp applications: [
  [
    apiToken: 'your-api-key',
    downloadAllowed: true,
    filePath: 'sample.apk',
    releaseNotesMethod: manual(isMarkdown: true, releaseNotes: 'Bug
fixes and minor updates'),
    uploadMethod: versionCreation('your-app-id')
  ]
], debugMode: false, failGracefully: false
```

### Version 1.2.4 (31st May 2018)

- Fix for failed release. No code changed.

### Version 1.2.3 (31st May 2018)

- [JENKINS-41873] - Only set HTTP Proxy credentials provider if credentials are non-empty (#39 - thanks Simon St John-Green)
- [JENKINS-48949] - Make the plugin testable in PCT with JEP-200 (#45 - thanks Oleg Nenashev)
- Stop NullPointerException when Username and Password are not set in the proxy configuration (#47 - thanks Ollie Troward)
- Update pom structure (#48)
- Add new maintainer (#49)

### Version 1.2.2 (17th January 2017)

- Make HockeyApp compatible with Pipeline
- Fixed JENKINS-26907 - config lost after restart
- Add ability for public/private download page for uploaded version
- Add ability for order / strategy when deleting older versions (JENKINS-27552)

### Version 1.2.1 (6th February 2016)

- Add support for using build parameters - expand tokens
- Add support for restricting by team IDs and boolean mandatory version

### Version 1.2.0 (19th November 2014)

**Warning! Plugin configuration format changed. Backward compatibility provided but it's recommended to backup Jenkins configuration before update.**

**Warning! Plugin program interface changed. If your code uses the plugin then it may fail with this plugin version.**

- Added support for upload multiple applications to the HockeyApp server from a single Jenkins job.
- Added support for uploading native libraries.
- Fixed #JENKINS-23549 – added informative error message when no files found to upload.
- Fixed #JENKINS-24255 – added support for upload multiple IPAs.
- Plugin adds HOCKEYAPP\_INSTALL\_URL and HOCKEYAPP\_INSTALL\_URL\_n environment variables after successful upload. The 'n' is replaced with the app index.

### Version 1.1.0 (28th May 2014)

- fixed #JENKINS-22848 (Can't publish from remote slaves)
- fixed #JENKINS-22657 (Proxy support)
- UI rewrite
  - Introduced radio buttons for selecting release notes type and upload methods (implemented as subviews)
  - Re-grouped configuration entries
  - Introduced warnings and errors
  - Updated help files to match the "official" hockeyapp wording
  - Added links to HockeyApp
- Enable overwrite of API URL to allow using the plugin with different (custom) domains
- Updated App ID handling: If an App ID is set, builds are always uploaded into this app
- Adapted plugin classes to new UI
- Implemented possibility to update from old plugin versions
- Updated Jenkins dependency to 1.509.4(LTS)

### Version 1.0.6 (23rd April 2014)

- Added support of Ant-style filename patterns for the file to be uploaded
- Added a global configuration for token ID
- Support cleanup even if no appId is specified
- Log upload speed for troubleshooting
- Avoid NullPointerException when configuring while job is running

#### **Version 1.0.5 (1st November 2013)**

- Adding support to switch from Textile to Markdown (by David Linsin)
- Added UTF-8 support for release notes (by David Linsin)
- Added support to retrieve release notes from a local file (by David Linsin)
- Add var expansion for API token and appId (by Fabio)
- Added support for system proxy (by Alexander von Below)

#### **Version 1.0.4 (9th April 2013)**

- Fixed a NullPointerException introduced in version 1.0.3
- Fixed inconsistency of whether to use absolute/relative paths when builds run on the master or a slave
- Improved documentation, particularly regarding usage for Android as well as iOS/Mac apps
- More feedback is given when invalid input is given to the cleanup feature

#### **Version 1.0.3 (7th January 2013)**

- Added option to use useAppVersionURL parameter to upload new version (by Pawel Cesar Sanjuan Szklarz)
- Add environment variable expansion for tags (by Tyler Kellogg)

#### **Version 1.0.2 (5th December 2012)**

- Fixed a bug that was causing the tags not to be stored into the configuration file. (by Valerio Mazzeo)

#### **Version 1.0.1 (18th September 2012)**

- Changed required core to 1.399

#### **Version 1.0 (18th September 2012)**

- Initial release
