

Enhanced Old Build Discarder

Plugin Information

View enhanced-old-build-discarder [on the plugin site](#) for more information.

This plugin adds an strategy to discard old builds only if the build is stable.

Description

Jenkins build history is a great tool to track down when a build became stable, and the standard strategy might destroy the history making it a little bit harder to track the culprits.

This plugin address this issue by adding an option to skip discarding if the last build is not stable, therefore leaving the history for investigation.
