

Create Job Advanced Plugin

Plugin Information

View Create Job Advanced [on the plugin site](#) for more information.

This plugin extends creating job.
When you create a job, it automatically adds all permissions for the creator.

Create Job Advanced	
Grant creator full control	<input checked="" type="checkbox"/>
Allow anonymous browsing	<input type="checkbox"/>
Replace spaces in the job name with "-"	<input type="checkbox"/>
Is Maven Archiving Disabled	<input checked="" type="checkbox"/>
Send Mail per failed Maven Module	<input type="checkbox"/>
<input checked="" type="checkbox"/> Define default log rotator value	
Days to keep builds	<input type="text" value="-1"/> <small>Set to -1 if you want to deactivate this rotator</small>
Max # of builds to keep	<input type="text" value="-1"/> <small>Set to -1 if you want to deactivate this rotator</small>
Days to keep artifacts	<input type="text" value="-1"/> <small>Set to -1 if you want to deactivate this rotator</small>
Max # of builds to keep with artifacts	<input type="text" value="20"/> <small>Set to -1 if you want to deactivate this rotator</small>
<input checked="" type="checkbox"/> Grant permissions based on job name	
Job name pattern	<input type="text" value="job.{[A-Z]{3}}.{*}"/>
Group format	<input type="text" value="perm.{0}.Developer"/>
Permissions	Create (Job): <input type="checkbox"/> Delete (Job): <input type="checkbox"/> Configure (Job): <input checked="" type="checkbox"/> Read (Job): <input checked="" type="checkbox"/> Build (Job): <input checked="" type="checkbox"/> Workspace (Job): <input checked="" type="checkbox"/> Delete (Run): <input type="checkbox"/> Update (Run): <input checked="" type="checkbox"/>
<input type="button" value="Add group definition"/>

Changelog

1.8 (Dec 29, 2013)

- update core dependency to 1.532
- fix compatibility issues with the maven-plugin since refactoring of the MavenMailer

1.7 (Okt 7, 2012)

- add support for two default values of maven projects ([pull #2](#)):
 - Disable auto archiving - to save disc space per default
 - Disable one mail per failed module - to not spam the users

1.6 (Aug 5, 2011)

- Updates to text/help.

1.5 (Oct 25, 2010)

- Dynamic permission definitions allow you to automatically grant permissions to specific groups at job creation time. You can define a regular expression to get information from the jobs name. e.g. if all your jobs follow a naming standard, like this: 'group.GROUP.FreeForm',

you can define a pattern like 'group.(.)(.)' and reuse the regular expression groups in the group format.
(special thanks to domi)

1.4

- Add documentation
- activate/desactivate automatically set anonymous rights
- (special tks to jsirola)

1.3

- Create an interface in Jenkins configuration
- activate/desactivate automatically set owner rights
- activate/desactivate replace space with "-" in the job name
- define default log rotator value

1.2

- Fix to work on version 1.334

1.1

- Fix bug if you create a job with template

1.0

- Initial Import
