

# Disable all jobs

Useful if you don't have the [Configuration slicing plugin](#)

This script disables all jobs in your Jenkins server

```
import hudson.model.*

disableChildren(Hudson.instance.items)

def disableChildren(items) {
    for (item in items) {
        if (item.class.canonicalName == 'com.cloudbees.hudson.plugins.
folder.Folder') {
            disableChildren(((com.cloudbees.hudson.plugins.folder.Folder)
item).getItems())
        } else if (item.class.canonicalName != 'org.jenkinsci.plugins.
workflow.job.WorkflowJob') {
            item.disabled=true
            item.save()
            println(item.name)
        }
    }
}
```
