

Display job parameters

There is [Job Parameter Summary Plugin](#) to visualize job parameters.

This script displays the parameters for all the jobs along with their default values (if applicable).

```
import hudson.model.*

for(item in Hudson.instance.items) {
    prop = item.getProperty(ParametersDefinitionProperty.class)
    if(prop != null) {
        println("--- Parameters for " + item.name + " ---")
        for(param in prop.getParameterDefinitions()) {
            try {
                println(param.name + " " + param.defaultValue)
            }
            catch(Exception e) {
                println(param.name)
            }
        }
        println()
    }
}
```

Sample output produced:

```
--- Parameters for GRA-00-UploadIntoClearCase ---
ONCSDAP1_USER jdoe
ONCSDAP1_PASSWORD
GRA_ZIP_NAME GRA_Delivery_r.2.0.0_28-5_impl.zip
GRA_RELEASE n.28

--- Parameters for IN8-03-DeployXnetWebAppToRecette ---
STOP_START_AS
```
