

URL Change Trigger

Plugin Information

No information for the plugin 'url-change-trigger' is available. It may have been removed from distribution.

Deprecated

This plugin has been deprecated. Please use the <https://wiki.jenkins-ci.org/display/JENKINS/URLTrigger+Plugin> to trigger a build when the response content from a URL invocation changes. Additionally, the <https://wiki.jenkins-ci.org/display/JENKINS/URLTrigger+Plugin> fixes all the issues of this plugin.

The URL Change Trigger plugin allows you to trigger a Hudson build when the content of a URL changes.

Setting up the URL Change Trigger is easy. Once you've installed the plugin, you'll see a new entry on the list of "Build Triggers" on your project configuration page, labeled "Build when an URL's content changes." Check it and fill in the URL. (It may be a "file:" URL, if you like; that will trigger a build whenever a file on your file system changes. This can be useful if you've mounted a remote network share using NFS or SMB/CIFS.)

Hudson will download the content at that URL once a minute. If the content changes, your build will launch.

We use the URL Change Trigger at [Redfin](#) to run our automated UI tests whenever our internal staging website is updated. [Redfin dev blog](#)

Change Log

Version 1.3 (Nov 19, 2011)

- JENKINS-11810

Version 1.2 (Dec 29, 2009)

- Fix help link
- Add cause information in builds
- Updated uses of deprecated APIs

Version 1.1 (Jan 18, 2009)
