

Template Project Plugin

Plugin Information

View Template Project [on the plugin site](#) for more information.

This plugin lets you use builders, publishers and SCM settings from another project.

A short set up guide

- Set up a template project that has all the settings you want to share. E.g. you could create one with no SCM filled in, but with all the builders and publishers you want for all your projects. Its best to mark this project as disabled, since you are not actually going to run it.
- Then set up a concrete project. Configure the SCM as you want. Then select 'use all the publishers from this project' and pick the template project. Ditto for the builders.

Limitations

- It may be using some plugins in ways that were not intended. Compatibility with all plugins is not guaranteed.
- It does not support project actions. That means that links that should be on the project page (e.g. 'latest test results') will not be there.
- It has had virtually no testing.
- "Use SCM from another project" may be missing unless you install the [multiple-scms](#) plugin. See [JENKINS-31712](#).

To do list

- Support project actions. This depends on being able to make some changes in jenkins-core in a backward compatible way.
- Parametrize the templates.
- (Maybe) Create a separate list of template projects, so you don't have to put them in your main list and can clearly identify them.

Change Log

Version 1.5.1 (Sep 3, 2015)

- Re-fix for [issue #24404](#)

Version 1.5 (Aug 31, 2015)

- Expand parameter values, some limitations may apply to SCM ([issue #28249](#))
- Support Cloudbees folder plugin ([issue #24396](#))
- Support for build environment variables ([issue #24404](#))
- Support for Multiple-SCM when using parameter value

Version 1.4.2 (July 9, 2014)

- Support of dependency declarations interface from included templates.

Version 1.4.1 (Mar 12, 2014)

- Fixed performance issue when Use SCM is not checked ([issue #22150](#))

Version 1.3 (Aug 15, 2011)

- Updated SCM proxy for latest Jenkins

Version 1.2 (Feb 11, 2010)

- Fix Hudson-breaking 1.1 release. ([JENKINS-5612](#))
- Fix to allow using build steps from a matrix project. ([JENKINS-5146](#))
- Get form field validators working again.

Version 1.1 (Feb 10, 2010)

- Update code for more recent Hudson

Version 1.0 (Feb 13, 2009)

- Initial release
