

Wipe out workspaces of all jobs

Useful before you make a copy or backup of your Jenkins installation.

This script wipes out the workspaces of all jobs on your Jenkins server

```
import hudson.model.*
// For each project
for(item in Hudson.instance.items) {
    // check that job is not building
    if(!item.isBuilding()) {
        println("Wiping out workspace of job "+item.name)
        item.doDoWipeOutWorkspace()
    }
    else {
        println("Skipping job "+item.name+", currently building")
    }
}
```
