

Onesky Plugin

Plugin Information

View OneSky [on the plugin site](#) for more information.

Maintain the localization process in sync with OneSky

Features

- Downloading of 'ready to be published' translation files from one sky
- Creation of the downloaded files over in your workspace
- Pipeline support

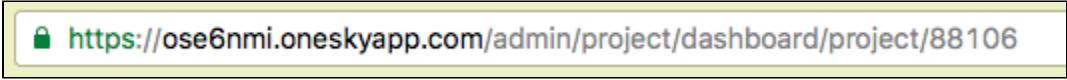

Usage

To use this plugin 4 things need to be configured:

1. The target translation project Id as found on the url of the onesky app
2. Secret key - This is where equivalent to a password for accessing the api
3. Public Key - This is the equivalent to a username for accessing the api
4. Resources Path - This is the relative path, inside your workspace, where your translation files will be output to

Configuration

To retrieve the **project Id** head over to the project definitions in your onesky app and copy and paste the ending of your URL:

<https://ose6nmi.oneskyapp.com/admin/project/dashboard/project/88106>

(88106 this example)

To the settings in your job:

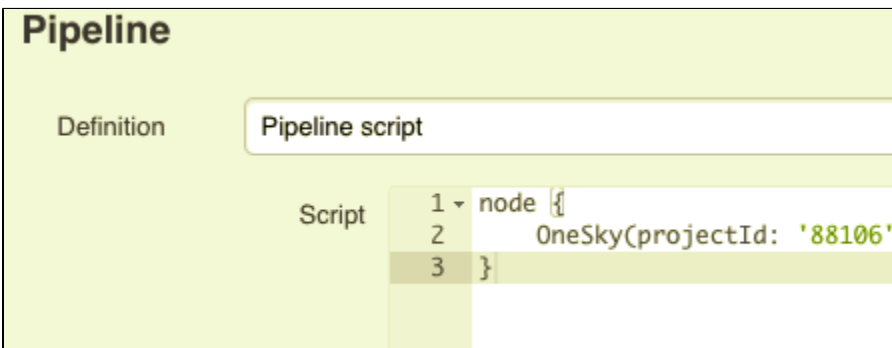

Download translation resources from One Sky

Project Id

The Id of the project as given by One Sky

Or your pipeline:

Pipeline

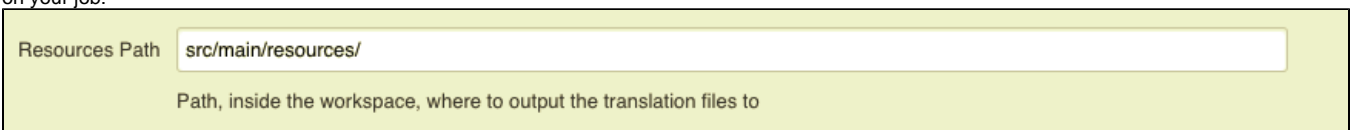

Definition

Script

```
1 node {  
2   OneSky(projectId: '88106'  
3 }
```

The **Resources Path** will be configured in the same place:

on your job:

Resources Path

Path, inside the workspace, where to output the translation files to

and on your pipeline:

Pipeline

Definition

```
Script 1 node {  
2     OneSky(projectId: '88106', resourcesPath: 'src/main/resources/2')  
3 }
```

Finally, both the **API Secret** and **API key** should be taken from the onesky app settings page:

Site Settings **API Keys & Usage** Logo & Theme Single Sign On Translation Page

Credentials to access OneSky API

Account
The API actions will be performed by this account.

Public Key
The key that will be public accessible.

Secret Key
Please keep this private, the key to access all your data via API.

Reset Secret Key

and saved in the global jenkins configuration:

One Sky Integration
