

leiningen plugin

Plugin Information

View leiningen-plugin [on the plugin site](#) for more information.

This plugin allows building projects using [leiningen](#).

Configure the leiningen plugin

- In order to set up leiningen-plugin, you need to specify the names and locations of your leiningen launch jars. Press the **Manage Jenkins** link and then the **Configure System**. You should now see the leiningen configuration section where you will be asked to specify the name and location for your leiningen launch jar.

Configure your project to use leiningen

- Open your project configuration and add a **Build using leiningen** build step
- Now, specify the leiningen arguments you need for your build.
- Once you saved the project configuration, you can run your project and watch the virtual console to see leiningen in action.

Todo

- Allow multiple leiningen launchers
- Allow downloading a leiningen launcher
- Integrate with test coverage

Changelog

0.5.6

Added ability to specify a subdirectory relative to the workspace to run leiningen in.

0.5.5

Fixes issue with configuration loading on restart.

0.5.4

Initial release
