

# XLRelease Variables Setter Plugin

## Plugin Information

View XLRelease Variables Setter [on the plugin site](#) for more information.

## Summary

XL Release Variables Setter is a plugin that permits to set variables values into a running release.

This plugin uses native [XL Release REST Api](#) ( [Xebialabs](#) © ) to communicate with.

## Installation

The plugin can be install with the differents methods described in the Jenkins documentation : [Jenkins Plugins - How to install plugins](#)

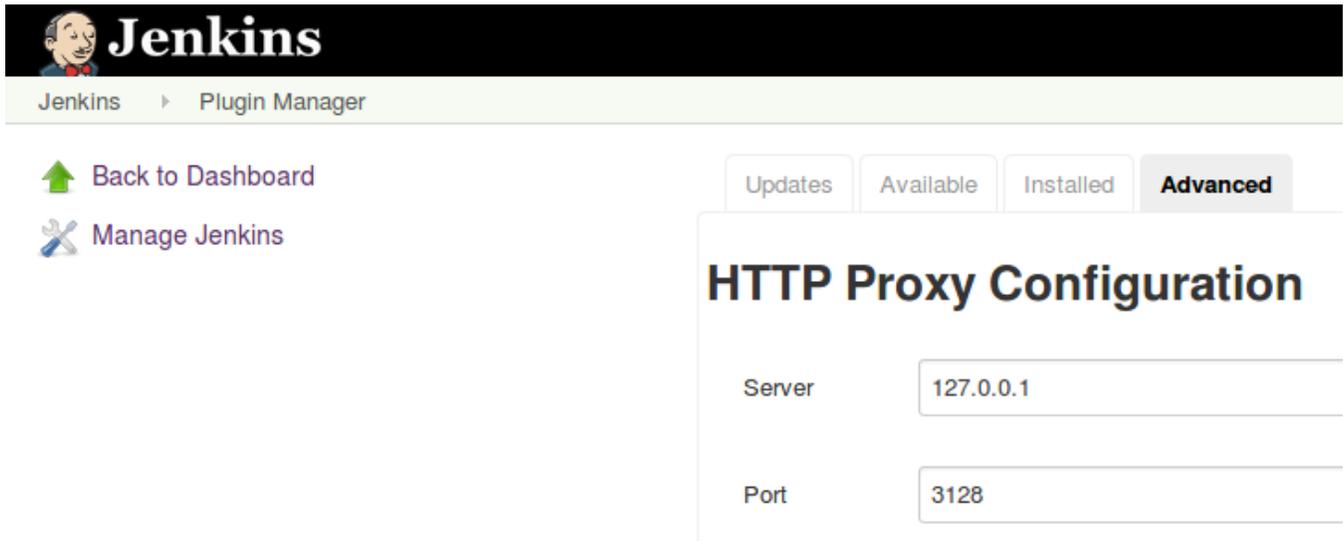

## Usage

### prerequisites

#### Jenkins Environment

If your Jenkins server is behind a HTTP Proxy, the plugin is checking its configuration first.

You can check or define it from this way : *Manage Jenkins -> Manage Plugins -> Advanced* tab

The screenshot shows the Jenkins Plugin Manager interface. At the top, there is a black header with the Jenkins logo and the word "Jenkins". Below this is a light green navigation bar with "Jenkins" and "Plugin Manager". On the left side, there are two links: "Back to Dashboard" with a green arrow icon and "Manage Jenkins" with a wrench icon. On the right side, there are four tabs: "Updates", "Available", "Installed", and "Advanced" (which is selected). Below the tabs is a white box titled "HTTP Proxy Configuration". Inside this box, there are two input fields: "Server" with the value "127.0.0.1" and "Port" with the value "3128".

#### XL Release Environment

Assuming your Jenkins server is already defined in XL Release ( *Shared Configuration -> Jenkins : Server* ), in a template, define a variable with an empty value, and uncheck *required*:

### Edit \${feedme} ✕

Variable name	<input type="text" value="feedme"/> <small>Unique name for the variable.</small>
Label	<input type="text" value="get the value from Jenkins job"/> <small>The label of the variable.</small>
Type	<b>Text</b> <small>Variable type.</small>
Default value	<input type="text"/> <small>The value of the variable.</small>
Description	<input type="text"/> <small>The description of the variable.</small>
Required	<input type="checkbox"/> <small>If selected, the variable cannot be empty when the release or task that uses the variable starts.</small>
Show on Create Release form	<input type="checkbox"/> <small>Show the variable on the Create Release screen or Create Release task.</small>

[Cancel](#) [Save](#)

Then, in a step configured as a Jenkins Job, add a Job Parameter for carrying the release Id :

Jenkins Job with VarSetter Plugin
Jenkins : Build

Test plugin / Plugin Test
9:00 AM

**Username**

Overrides the password used to connect to the server

**Password** 

Overrides the password used to connect to the server

**Job Name \***

Name of the job to trigger; this job must be configured on the Jenkins server. If the job is located in one or more Jenkins folders, add a 'job' segment between each folder.

**Job Parameters**

```
XLR_releaseid=${release.id}
```

Save    Cancel

If the Jenkins job expects parameters, provide them here, one parameter per line (for example, paramName=paramValue)

**Due date**

26
May 2017  
Friday

9:01 AM

**Duration**

0d 0h 1m

**Tags**

Add a tag...

**Assigned to** Assign to me

assign  
 assign

---

**Output properties**

The output of the script can be stored in release variables; specify the variables to be used (optional)

**Build Number**

## Global Configuration

This section permits to define any parameters needed to access to a XL Release server

*Manage Jenkins -> Configure System*

**XL-Release**

XL-Release Hostname

XL-Release Port

XL-Release User

XL-Release Password

- XL-Release Hostname : The host name of your XL-Release server
- XL-Release Port : The port number of your XL-Release server
- XL-Release User : The user used to connect to the XI-Release server
- XL-Release Password : The password associated to the user used to connect to the XI-Release server

Before saving parameters, use the *Test Connection* button to validate the configuration.

Connection OK

Test Connection

## Jenkins Job Configuration

Add a String parameter, that have the same name as the variable name defined in XL Release, to catch the release id.

This build is parameterized

### String Parameter

Name

Default Value

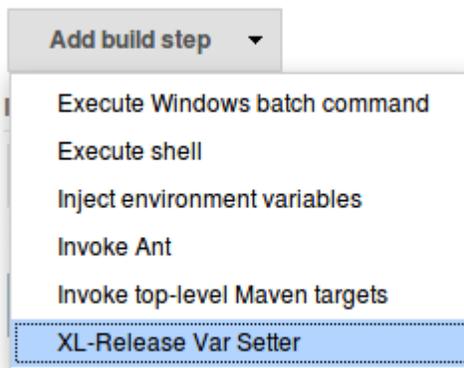

Description

[Plain text] [Preview](#)

Delete

## Jenkins Step Configuration

If the global configuration is done and all is correct, then in a free-style project you can see the item **XL-Release Var Setter** in the list build step.

To configure the job step, you need to set this parameters :

### XL-Release Var Setter

XL-Release Id

XL-Release Variable Name

Jenkins Variable Name

Debug mode  verbose logs

Delete

- XL-Release Id : The Jenkins variable, defined as a string parameter, valued by XL Release.
- XL-Release Variable Name : The XL Release variable name (without \$ character) you want to be updated in XL Release.
- Jenkins Variable Name : The name of the Jenkins Variable, that the value herits from previous steps, to be send to XL Release.
- Debug mode : Check for verbose logs.

Simple example of a job ( using the [EnvInject Plugin](#) ) :

#### Build

##### Execute shell

```
#!/bin/bash
myVar="CatchMeIfYouCan"
echo "This Script define \"${myVar}\" as value of myVar.."
echo "myVar=${myVar}" > build.properties
```

See the [list of available environment variables](#)

Delete

##### Inject environment variables

Properties File Path

Properties Content

Delete

##### XL-Release Var Setter

XL-Release Id

XL-Release Variable Name

Jenkins Variable Name

Debug mode

verbose logs

Delete

## Execution

When the job is launched, you can follow the interactions between Jenkins and XL Release in the console. If you have checked the debug mode, the outputs are more verbose.

If the job have a problem, the console shows the stacktrace.

## Console Output

```
Démarré par l'utilisateur anonymous
[EnvInject] - Loading node environment variables.
Building in workspace /home/olivier/.jenkins/jobs/XLRelease_VarPlugin_Tests/workspace
[workspace] $ /bin/bash /opt/tomcat9/temp/hudson6832259052145813341.sh
This Script define "CatchMeIfYouCan" as value of myVar..
[EnvInject] - Injecting environment variables from a build step.
[EnvInject] - Injecting as environment variables the properties file path '/home/olivier/.jenkins/jobs/XLRelease_VarPlugin_Tests/workspace/build.properties'
[EnvInject] - Variables injected successfully.
