

External scheduler plugin

This plugin is deprecated and should not be used

Plugin Information

No information for the plugin 'external-scheduler' is available. It may have been removed from distribution.

This plugin delegates scheduling decisions to external scheduler implementation. A list of scheduler implementations can be configured at the global config page. The plugin picks the first configured scheduler or the default Jenkins scheduling mechanism if there is no scheduler configured or the implementation misbehaves.

This way administrators can preserve any number of configured schedulers of any kind and activate one of them by moving it to the front of the list.

Choose custom scheduler

Add scheduler ▼

Delegate scheduling to REST service

Use custom Groovy Script

Use default Jenkins scheduling mechanism

Extending plugin

This plugin exposes [Scheduler](#) extension point for other plugins to register their own schedulers. The implementation yields an item to node mapping describing where an item should run.
