

Log Trigger Plugin

Plugin Information

No information for the plugin 'log-trigger' is available. It may have been removed from distribution.

(^-- not published in update center; see download link below)

Trigger downstream builds if a pattern is found in the build console log.

Description

The [Log Trigger](#) plugin provides a post-build action that allows Hudson builds to search their console log for a given regular expression and if found, trigger additional downstream jobs.

Configuration

You can download [log-trigger.hpi](#) or build from [source](#). Install `log-trigger.hpi` into `$HUDSON_HOME/plugins` (either manually or through the Plugin Manager web interface) and restart Hudson. The plugin is configured by selecting the "*Build other projects based on console log*" post build action.

Bugs/Feature Requests

If you have any issues, create a [new ticket](#).

Source

You can check out the [Log Trigger](#) plugin from [here](#) using Subversion, or [browse the source](#) with Trac.
