

SVN Workspace Cleaner

Plugin Information

View Subversion Workspace Cleaner [on the plugin site](#) for more information.

Automatically removes SVN modules from workspaces when the modules are removed from the job's SVN configuration.

Actually, any folder in the workspace root which is *not* configured as an SVN module but contains a `.svn` folder will be removed.

Configuration

To enable for a job, check "Clean up unused Subversion modules" under Build Environment.

Change log

1.1 (August 26, 2014)

- Added support for removing unused Subversion modules in subdirectories of the build workspace.

1.0 (May 11, 2012)

- First public release.
