Report Portal is a full featured report management tool for test automation.

Utilize Machine Learning to identify and categorize failed tests.

- Manage all your automation results and reports in one place
- Achieve full automation visibility in real-time by centralizing and aggregating all logs, reports and media data for indisputable evidence.
- Make automation results analysis actionable & collaborative
- Collaborate with your team members to associate each failed test with a known product bug, automation issue, system issue or other custom defect type.
- Establish fast traceability with defect management
- Submit and track defects with full evidence (logs, screenshots, comments, etc.) directly from a failed test case into a bug tracking system.
- Accelerate routine results analysis
- Use the collected history of executions and fail patterns to achieve hands-free analysis of your latest results.
- Visualize metrics and analytics
- Build custom dashboards and metrics to learn from the past and predict trends.
- Make smarter decisions together
- Use ReportPortal's collaborative test automation environment with your team to improve your delivery quality.
