

Gatekeeper plugin

Plugin Information

View Gatekeeper [on the plugin site](#) for more information.

Plugin that implements 'Gatekeeper' development workflow including:

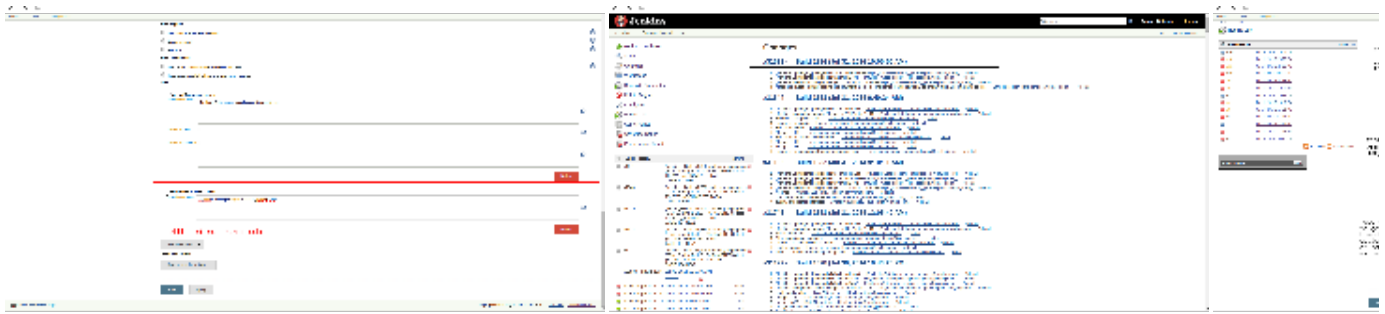

- Create release branches with optional release (version) file generation
- Performs Gatekeeping by merging 'feature' branches with 'release' branches
- Provides ability to upmerge release branches between each other to propagate changes from lower release to higher one.

Plugin provides such build steps:

- Perform Gatekeeper merge
- Perform Gatekeeper commit
- Perform Upmerging of release branches
- Perform Push

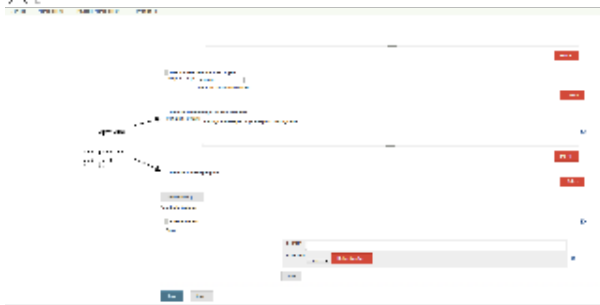

To activate this plugin, configure your job with "Perform Gatekeeper commit." build step.

Configuration and results

commit build step configuration

build parameters o

upmerge and push build steps configuration

Plugin works nicely together with [Fogbugz plugin](#) so if you use Fogbugz as a issue tracker, it can simplify a lot your workflow with this plugin.
