

Inodes Monitor Plugin

Plugin Information

View Inodes Monitor [on the plugin site](#) for more information.

This plugin offers a way to monitor inodes consumption for Jenkins nodes. Like other node monitors, it can be used to automatically, and temporarily, take a node offline when there is not enough inodes left.

Screenshots

Under the `/computer` url, you will see a new column added after you install the plugin:

Used Inodes
50%

if you open the `/computer/configure` page, you can set the percentage above which a problematic node should be taken offline until you resolve the issue (defaulting to 95%):

Used Inodes

Inodes Usage Percentage Threshold

Installing it

Install ↓

[Inodes Monitor](#)
This plugin adds a monitor for inodes usage of nodes.
