

# Selfie Trigger Plugin

## Plugin Information

View Selfie - Build trigger [on the plugin site](#) for more information.

Selfie trigger plugin enables build to trigger itself after a configured delay.

The delay (in seconds) can be set while configuring the build as shown in the image below.

The screenshot shows a configuration window titled "Build Triggers". It contains a list of trigger options with checkboxes:

- Build after other projects are built
- Build periodically
- Poll SCM
- Selfie Build Trigger

Below the list, there is a "Delay" label and a text input field containing the value "15".

At the bottom of the configuration window, there is a section labeled "Build".
