

Klocwork Community Plugin

Plugin Information

View Klocwork Community [on the plugin site](#) for more information.

This plugin automates Klocwork analyses. For up-to-date documentation please visit the Emenda website: <http://emenda.com/jenkins-klocwork-docs>

EMENDA
QUALITY ■ SECURITY ■ COMPLIANCE

Maintained by [Emenda](#)

Latest features:

- [Pipeline](#) support
- [Job-DSL](#) support
- Klocwork Cross-Project Synchronisation
- Incremental Diff Analysis & Quality Gateway

Note on Deprecation in v2.0+

Please note that in v2.0 we added new functionality to the plugin. Instead of updating (and possibly breaking) the old parts of the plugin we added completely new functionality. We will not remove any existing functionality but have marked it as Deprecated and will not actively add new features to it. Instead we recommend that you start using the new features, as detailed in the [documentation](#). We hope that the new features are better and easier for you to use!

Changelog

Version 2.4.7

- Bug Fix: Resolved issue introduced in 2.4.6 where global server/install settings were not being saved. No impact or change to configuration should be needed.
- Bug Fix: Resolved issue where the trend graph and Klocwork link introduced in 2.4.3 were not showing in pipeline jobs. No impact or change to configuration should be needed.
- Bug Fix: Resolved issue when generating a pipeline snippet on step 'klocworkIntegrationStep2'. No impact or change to configuration should be needed.

Version 2.4.6

- Feature: Added the ability to use with jcasc plugin. No impact or change to configuration should be needed.

Version 2.4.5

- Bug Fix: Resolved issue in which when reading the ltoken file the resource was not closed. No impact or change to configuration should be needed.

Version 2.4.4

- Bug Fix: Post-build step "Klocwork Gateway". The query string sent to the server was being incorrectly formatted due to errors in the code. No impact or change to configuration should be needed.

Version 2.4.3

- New feature: Added trend graph and link to Klocwork review to the main product page. Configuration can be found in the integration step for loading. **This does impact pipeline configuration**
- **Important note:** This version requires an update to the pipeline scripts running integration builds to continue to run. Please find examples below:

Pipeline before 2.4.3:

```
klocworkIntegrationStep2 ( [ tablesDir: "${KLOCWORK_TABLES}", buildName: "", additionalOpts: "" ] )
```

Pipeline 2.4.3 without trend chart:

```
klocworkIntegrationStep2 (
  serverConfig:[
    tablesDir: "${KLOCWORK_TABLES}",
    buildName: "",
    additionalOpts: ""
  ]
)
```

Pipeline 2.4.3 with trend chart:

```
klocworkIntegrationStep2 (
  serverConfig:[
    tablesDir: "${KLOCWORK_TABLES}",
    buildName: "",
    additionalOpts: ""
  ],
  reportConfig:[
    displayChart: true,
    chartHeight: "",
    chartWidth: "",
    query: "status:Analyze"
  ]
)
```

Version 2.4.2

- Bug fix: Dashboard feature caused a could "not serialize" bug in some environments. Implemented Serializable for KlocworkIssue. No impact to existing configuration expected.

Version 2.4.1

- Bug fix: Dashboard feature caused a could "not serialize" bug in some environments. Implemented Serializable for KlocworkSeverities and KlocworkStatuses. No impact to existing configuration expected.

Version 2.4.0

- Bug fix: Dashboard feature caused a could "not serialize" bug in some environments. Implemented Serializable for KlocworkXMLReportParser and KlocworkXMLReportParserIssueList. No impact to existing configuration expected.
- Bug fix Fixed pipeline snippet editor not showing the correct snippet for quality gate. No impact to existing configuration expected.

Version 2.3.9

- New feature: Added parameter to Klocwork CI gateway to "report results". This creates a link on the build/project page to "Klocwork Dashboard" which allows issues to be seen. No impact to existing configuration expected.
- New feature: Changed step Klocwork CI gateway to allow multiple quality gates similar to the integration build. No impact to existing configuration expected.
- New feature: Changed step Klocwork CI gateway to include filtering on severities and statuses. No impact to existing configuration expected.

Version 2.3.8

- New feature: Added parameter to Klocwork CI gateway to allow the build to fail as unstable rather than failure. No impact to existing configuration expected.

Version 2.3.7

- Minor bug fix: Updated file handling to use UTF-8 to support use in Japan

Version 2.3.6

- New feature: added an option to the quality gate to stop the build from continuing if the gate failed a condition
- Major bug fix: fixed backwards compatibility issue with quality gate in pipelines when referring to old config using the terms 'Desktop', when using old config this cause the quality gate to be skipped.

Version 2.3.5

- Minor bug fix: resolved issue where the quality gate config wouldn't show in job configuration page.

Version 2.3.4

- New feature: Added in support to use kwciagent as the diff analysis tool
- Re-factored plug-in to refer to Ci rather than Desktop in the diff analysis
- Minor bug fix: fixed issue were build command got encapsulated in quotes
- Added a config file for the pipeline step for the build specification generation step, this enables the step to appear in the syntax generator.

Version 2.3.3

- Minor bug fix: resolved issue in diff analysis where files/paths were in a different case on windows between the build specification and file system were being ignored.
- Minor bug fix: resolved issue on windows were the git change list command was incorrectly encapsulating the command with double quotes.

Version 2.3.2

- Added the Klocwork tools kwgradlew and kwgradle to the drop down selection for the build specification step

Version 2.3.1

- Minor bug fix: resolved conflict with other plug-ins using older versions of org.joda.time

Version 2.3

- New feature: added a new step for generating a build specification file to be run before the analysis steps

Version 2.2.3

- New feature: added an option to the integration build step to disable the running of kwdeploy.

Version 2.2.2

- Changed how the output from kwcheck was generated to reduce console noise and generate a consistent xml
- Minor bug fix: Fixed an issue with windows agents were env vars were not injected correctly

Version 2.2.1

- Minor bug fix: updated deprecated build step to make use build name setting

Version 2.2

- New feature: support for Java diff analysis

- Major bug fix: resolved issue where global license server settings were passed to integration analysis step even if blank
- Major bug fix: updated the integration quality gate query to allow users to specify grouping: on if they wish

Version 2.1

- Minor bug fix: resolved potential NPD when checking threshold values
- Minor bug fix: updated the wiki link in the plugin pom.xml
- Major bug fix: updated Klocwork api library to make use of Jenkins environment variables

Version 2.0

- Simplified creation of Klocwork static analysis jobs or tasks
- Supports Klocwork full, incremental and incremental diff analysis
- Allows job success criteria to be connected to static analysis results via a Quality Gateway
- Provides per-checkin CI analysis of just the changed files for minimum analysis times
- Support for Jenkins Pipelines
- Support for Job-DSL

Version 1.24.6

- Merged various changes and bug fixes from Emenda
- Added support for use of variables in configuration
- Updated the version of kwjlib for Klocwork API usage
- Updated the global settings so that it uses the Klocwork tool in the path

Version 1.18

* Fix reopened [JENKINS-29673](#) - Klocwork plugin does not work in a master/slave configuration

Version 1.17

* Fix [JENKINS-29673](#) - Klocwork plugin does not work in a master/slave configuration

Version 1.16.3

- * Avoid errors when building on slaves
- * Avoid error 500 when restarting Jenkins
- * Avoid NPE from old version of config.xml which doesn't contain the tag <webAPI>

Version 1.16.2

- * Clean code by applying IDEA format and by removing unused code
- * Use SCM features for changelog

Version 1.16.1

* Changing Jenkins version to be Java 7 compliant

Version 1.16

- * Enabled multiple build specification files
- * Removed Dashboard portlet component to also remove dependency on dashboard view plugin
- * Added SSL support
- * Build graph previously incorrectly removed, now re-instated
- * Fixed Multiconfiguration project bug in Publisher

Version 1.15

* Enabled embedded Klocwork results in Klocwork v9.6 and later.
Achieved using kwjlib to retrieve issues from Klocwork Web API, which are put into an XML file by KloXMLGenerator and then parsed as before

Version 1.14.1

* Allowing Klocwork publisher to appear in maven job

Version 1.14

* Fixed NullPointerException and added compiler options

Version 1.13

* Fix reopened [JENKINS-12861](#) - klocwork - update to recognize 9.5.x xml schema

Version 1.12

* Fix [JENKINS-12861](#) - klocwork - update to recognize 9.5.x xml schema

Version 1.11

* Merge pull request - Add compatibility with Klocwork v9.6

Version 1.10

* Fix [JENKINS-13668](#) - Klocwork Plugin Fails if no KW Issues

Version 1.9

* Fix [JENKINS-14005](#) - Major issue when Klocwork reporting is enabled

Version 1.8.1

* Allow publisher part to appear in maven jobs.

Version 1.8

* Fixed [JENKINS-13743](#) - Jenkins 1.463 + Klocwork plugin - crashes when saving configuration

Version 1.7

* Fixed [JENKINS-12535](#) - Link to the line which contains the klocwork error instead of just linking to the file.

Version 1.6

* Update to latest DTKit versions

Version 1.5

* Updated version number. Provided variable `$(BUILD_ID)` when specifying Klocwork tables directory such that a unique directory can be used for each build.

* Added functionality to specify options for `kwbuildproject`. Useful for changing location of tables directory, adding compiler options, etc.

Version 1.4

* Updated xml parser to work with reports generated by Klocwork v9.5. New features: per-build pie chart showing number of issues and their state, a link to view the `build.log`, link to view the `parse_errors.log` and a link to access Klocwork Review within Jenkins. Now to test on Windows.

Version 1.3

* Fixed [JENKINS-10773](#)

* Fixed [JENKINS-10775](#)

* Fixed [JENKINS-10776](#)

Version 1.2

* Fixed [JENKINS-10455](#)

Version 1.1

- * Fixed [JENKINS-10379](#) - Allowed statuses for Klocwork report are incorrect
- * Fixed args parsing

Version 1.0

- * Initial version
