

OpenJDK native installer plugin

Plugin Information

View openJDK-native-plugin [on the plugin site](#) for more information.

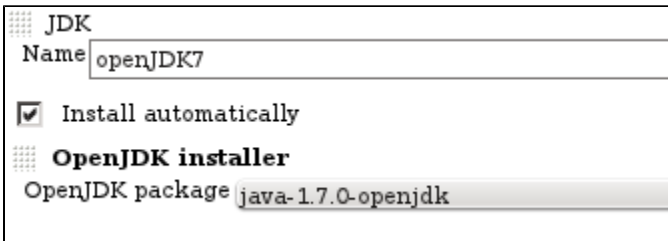

This plugin adds auto installer for OpenJDK from native RPM packages and provides switching between OpenJDK versions using Linux alternatives

Configuration

Add Java installation, select "Install automatically" and choose OpenJDK installer

Select RPM package, which you want to install

Alternatives and yum are run via sudo, therefore appropriate sudoers setup is required (including switching off tty requirement which is turned on by default or run pseudo-tty e.g. by including -t param in ssh command).

Example setup:

/etc/sudoers.d/jenkins

```
#Defaults    requiretty
User_Alias JENKINS = test_user
Cmnd_Alias OPENJDK_INSTALL = /usr/sbin/alternatives, /usr/bin/yum
JENKINS ALL = NOPASSWD: OPENJDK_INSTALL
```

Changelog

Upcoming changes

Release 1.1 (2015-01-16)

- Added OpenJDK8 ([JENKINS-26434](#))

Release 1.0 (2012-03-01)

- Initial release
