

Bitbucket (Stash) Notifier Plugin

Plugin Information

View Bitbucket Server Notifier [on the plugin site](#) for more information.

Overview

This plugin notifies an Atlassian Bitbucket Server (formerly known as Stash) instance of Jenkins builds in progress and of their results.

The build results will show up in the commit or pull request list in Bitbucket and provide immediate and easy to scan feedback about a commit.

It is possible to navigate from build result information in Bitbucket directly to the build in question.

The plugin can be configured on a per-job basis, globally for all jobs or both to minimize the configuration overhead.

Usage

A detailed description can be found in the plugin's [readme](#).
