Phing Plugin

Phing Plugin

This plugin allows you to use Phing to build PHP projects.

Configuration

System Configuration

If you have **multiple** Phing installations, you can configure Jenkins to allow that each project will select the installation that will use.

> ⊘ If phing is in the path, you don't have to configure phing.

> ⓘ You can use environment variables in PHING_HOME like $WORKSPACE, $HOME etc.

> ⊘ **Composer users**
>
> For composer users, if you have phing installed in $HOME/vendor/bin/phing, then specify "$HOME/vendor/" or "$HOME/vendor/bin" as PHING_HOME.

> ⊘ **PEAR users**
>
> For PEAR users, if you have phing installed in /usr/bin/phing, then specify "/usr" or "/usr/bin" as PHING_HOME.

Phing

Phing installations	⬚ Phing		
	Name	2.4.13	ⓦ
	PHP Command		ⓦ
	☑ Install automatically		ⓦ
	⬚ **Extract *.zip/*.tar.gz**		ⓦ
	Label		ⓦ
	Download URL for binary archive	http://www.phing.info/get/phing-2.4.13.zip	ⓦ
	Subdirectory of extracted archive		ⓦ

Delete Installer

Add Installer ▼

> ⊘ Do not specify "Subdirectory of extracted archive".

Project Configuration

This plugin works as other builders like Ant builder or Gant builder.

Build

⠿ **Invoke Phing targets**   ❓
