

Reqtify Plugin

Dassault Systèmes's **Reqtify** is an easy to use interactive application for managing requirement, traceability and impact analysis across different systems, programs and project levels across the entire hardware and software development lifecycle.

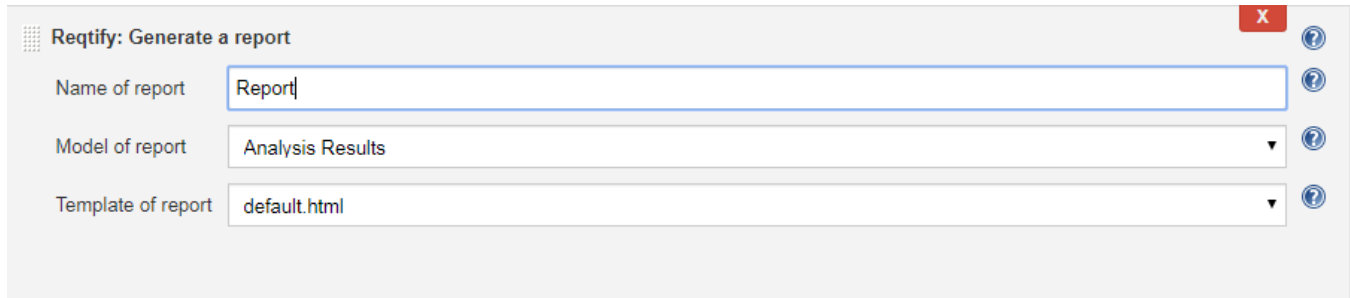

This plugin allows to configure Reqtify report generation from Jenkins and then generate during the build.

Configure Reqtify Report Generation

In the project configuration page, add a **Reqtify: Generate a report** build step.

This allows to fill following fields:

A screenshot of the 'Reqtify: Generate a report' configuration form in Jenkins. The form has a title bar with a red 'X' icon and a help icon. Below the title bar, there are three input fields: 'Name of report' with the value 'Report', 'Model of report' with the value 'Analysis Results', and 'Template of report' with the value 'default.html'. Each field has a help icon to its right.

- **Name of report** - This is the name of report without any path or suffix. This report file will be created at the root of the Jenkins workspace.
- **Model of report** - This is the report model. The list contains both library and project report models.
- **Template of report** - This is the template of report. The list contains both library and project report templates.

Note:

The plugin will work only when Reqtify project is present in the Jenkins workspace.

Reqtify version required: 2020x
