

Jenkins Build Trigger issue with slack Outgoing WebHooks

It gave me hard time to trigger build from the Slack even if we created the Incoming - Outgoing webhooks in the slack. Build Triggers description is completely found to call the build from the API or trigger URL directly.

Build Triggers

- Trigger builds remotely (e.g., from scripts) ?
Authentication Token
Use the following URL to trigger build remotely: `JENKINS_URL/job/ServerStatus_AU/build?token=TOKEN_NAME` or `/buildWithParameters?token=TOKEN_NAME`
Optionally append `&cause=Cause+Text` to provide text that will be included in the recorded build cause.
- Build after other projects are built ?
- Build periodically ?
- Poll SCM ?

If you are facing the same problem by putting the URL on the given description, you need to change the Url like "JENKINS_URL:port/buildByToken/build?job=JOBNAME&token=Authentication_Token" replace JOBNAME and Authentication_Token according to your build.
