

EasyQA Plugin

Plugin Information

No information for the plugin 'easyqa-plugin' is available. It may have been removed from distribution.

This is a plugin for Jenkins that aims for providing support for [EasyQA](#) inside [Jenkins](#).

General

The main feature is to create an issue on [EasyQA Test Management Tool](#) when the build fails in Jenkins.

Configuration

Global configuration

To start using this plugin, EasyQA sites should be configured on the global configuration page. For each job a separate project can be selected, and specific options can be set. Here you need to specify:

EasyQA

EasyQA sites

EasyQA Project name: EasyQA

Base URL: https://app.geteasyqa.com

Project token: KRgbKwWuZTLAgxXT6rkq2nYGVol1CZJp

User email: yana.gusti@thinkmobiles.com

User password:

Test Connection

Удалить

Добавить

Here you setup the EasyQA sites you want to connect to. The specific site is then selected in the build configuration

- *EasyQA Project name*
- *Base URL* (if you use *EasyQA Cloud*, the **base URL** is - <https://app.geteasyqa.com/>)
- *Project token* (you can find in on the **Integrations** page within your project in EasyQA)

Project configuration

EasyQA Plugin Settings

Integrate with EasyQA

EasyQA project name 

Failure Mode NONE UNSTABLE FAILURE 

When you have set up your EasyQA site(s) in the global configuration you can enable the integration on the job configuration page. You select the project you want to integrate with and the failure mode.

Create an issue on EasyQA after Build failure

Create an issue on Build failure on EasyQA

Build result Failure Failure or unstable

Attach build log

Add a post-build action - Create an issue on Build failure on EasyQA. Here you can choose for what result do you want to create an issue and if you want to attach build log file.
