

Logentries Plugin

Plugin Information

View Logentries Forwarder [on the plugin site](#) for more information.

This plugin forwards console output to Logentries.com.

Usage

- Create a token based input on logentries.com using [these instructions](#).
- Enable the "Logentries Forwarder" in the "Build Environment" section of your job configuration.
- Copy the token generated by [logentries.com](#) into the "Token" field:

Build Triggers

- Build after other projects are built
- Build periodically
- Poll SCM

Build Environment

- Logentries Forwarder

Token

Token for the log on logentries.com. More information can be found [here](#).

- Now the console output will be sent to your log on [logentries.com](#) and you can search and analyze it to your heart's content.
