

# Regression Report Plugin

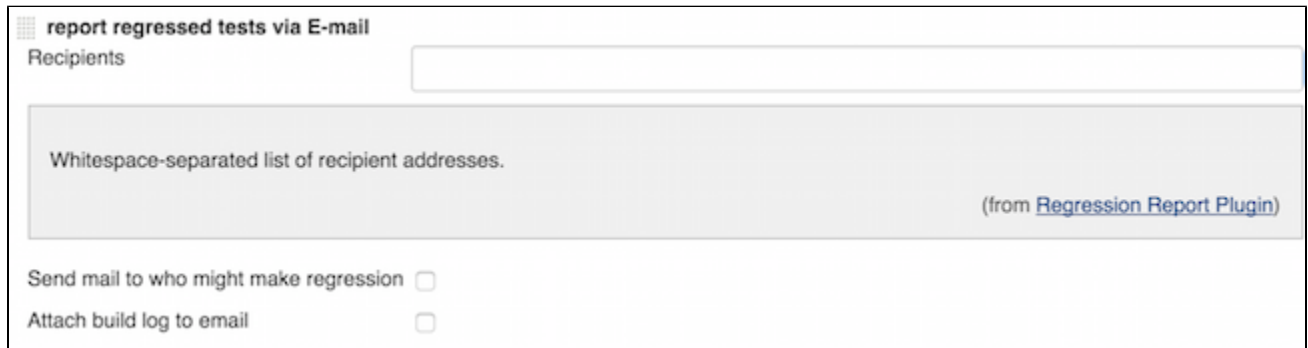

## Plugin Information

View Regression Report [on the plugin site](#) for more information.

## Regression Report Plugin

This plugin sends a mail if your test cases find regression (new failure).

## Screen Shot

The screenshot shows a configuration page for the 'report regressed tests via E-mail' plugin. At the top left, there is a hamburger menu icon followed by the title 'report regressed tests via E-mail'. Below the title is a 'Recipients' label and an empty text input field. A large grey box contains the instruction 'Whitespace-separated list of recipient addresses.' and a note '(from [Regression Report Plugin](#))'. At the bottom, there are two checkboxes: 'Send mail to who might make regression' and 'Attach build log to email', both of which are currently unchecked.

## History

See [README.md](#) for detail.
