

# Build With Parameters Plugin

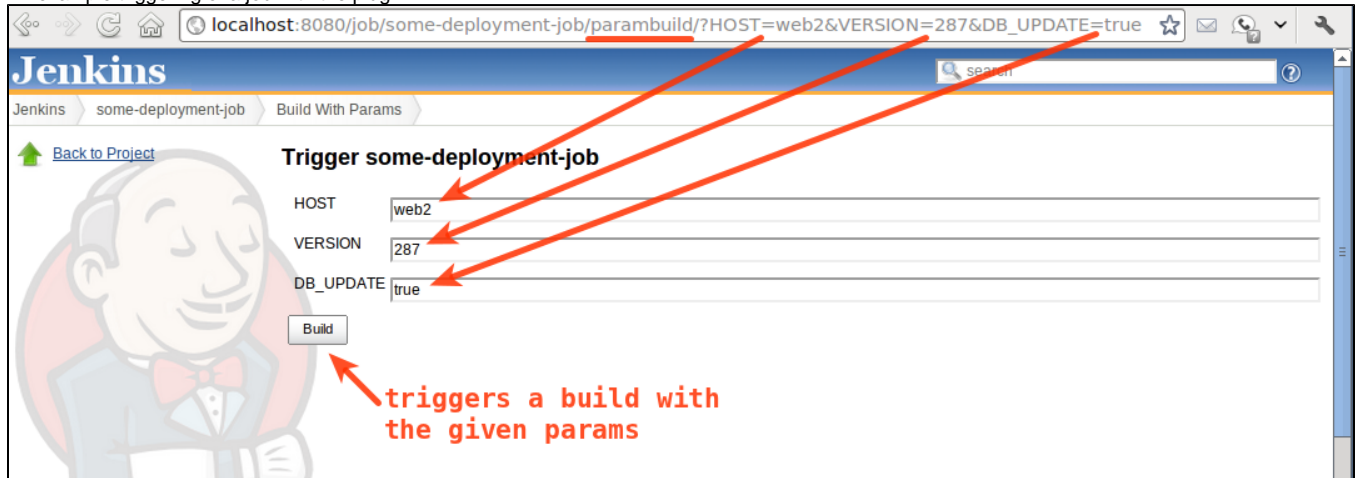

## Plugin Information

View Build With Parameters [on the plugin site](#) for more information.

Allows the user to provide parameters for a build in the url, prompting for confirmation before triggering the job.

The plugin exposes `$/JENKINS/job/$JOB/parambuild` url to trigger the build with parameter. Unlike `$/JENKINS/job/$JOB/buildWithParameters`, human must confirm that the parameters are correct before the build is triggered. This is useful if you want to create a list of jobs with parameters to trigger ahead of time, and execute it at some future date (e.g. a deployment plan).

An example triggering of a job with the plugin:

## Changelog

### 1.4
