

BitKeeper Plugin

Plugin Information

View BitKeeper [on the plugin site](#) for more information.

Add BitKeeper support to Jenkins

This BitKeeper plugin supports polling, checkout and changeset parsing.

For polling, the plugin queries the parent repo for the latest CSETKEY. Any change there triggers a build.

For checkout, there is a configuration option to use 'pull' or 'clone'. In a clean workspace, a clone is always performed. For pull, the repository is preserved between runs, and only a pull is performed. If 'pull' is not used, the target repository directory is deleted before performing a new clone.

ChangeSet parsing is done with a custom 'log' format. It tracks individual changesets, and retrieves the comment and user associated with the changeset. It does not yet display the file names that were changed in a changeset.

Tagging the parent repo via Jenkins is not supported.

Change Log

Version 1.5 (Jan 27, 2010)

- Update code for more recent Hudson

Version 1.4 (Jun 24, 2008)
