

Hyper.sh Build Step Plugin

Plugin Information

View Hyper.sh Build Step [on the plugin site](#) for more information.

Run some tasks of Jenkins job in [Hyper.sh](#) container. This plugin allows to add "Execute shell in Hyper.sh" build step into your job.

The screenshot shows the configuration interface for the "Execute shell in Hyper.sh" build step. It features a title bar with a grid icon and the text "Execute shell in Hyper.sh". Below the title bar, there are two input fields: "Docker Image" with the value "ubuntu" and "Command" with the value "echo hello". At the bottom left, there is a button labeled "Add build step" with a downward arrow.
