

# Redmine Metrics Report Plugin

## Plugin Information

View Redmine Metrics Report [on the plugin site](#) for more information.

## Summary

This plugin aggregates redmine issues by the specified custom query and creates html report using google chart.

## How To Use

1. Open project configure page, in build section click [Add build step] -> [Generate Redmine Metrics Report].
2. Click [Add] to add multiple Redmine Projects.
3. Specify Redmine Info.
4. In the Post-build Actions, use the [\[HTML Publisher Plugin\]](#) to display the generated html reports.  
Note: In order to allow Jenkins to run html page with javascript, You have to set the following script in Jenkins script console and clean browser cache. This setup won't survive after Jenkins service restart, so you have to set it again and clean browser cache.

```
System.setProperty("hudson.model.DirectoryBrowserSupport.CSP", "")
```

5. After the project is built successfully, click [Redmine Report] on the side menu to see the report.

## Feature

- Issue Increment Chart (Open Issues)
- Issue Open & Close Chart
- Assignee Chart
