

# AWS CodeCommit Trigger Plugin

## Plugin Information

View AWS CodeCommit Trigger [on the plugin site](#) for more information.

Enables Jenkins to trigger jobs on repo update events by AWS CodeCommit through SQS and SNS.

## Introduction

A Jenkins plugin that triggers jobs on repo update events by AWS CodeCommit, through the AWS Simple Queue Service (SQS) and Simple Notification Service (SNS).

The advantage over the [AWS SQS Plugin](#) is that this plugin allows:

- subscribing to multiple branches using the same SQS queue
- subscribing to multiple repos using the same SQS queue

There are several (advantageous) implications:

- you no longer need to create a SQS queue per CodeCommit repo
- an update to the `dev` branch will no longer trigger all jobs that subscribe to that CodeCommit repo.

## Quick Setup With Terraform

Use the [tf-codecommit-sqs](#) module to create your CodeCommit repos created with provided linkage with SQS/SNS.

## Authors

AWS CodeCommit Trigger Plugin is provided by [Ribose Inc.](#) (GitHub page: [Ribose Inc.](#))

The original [AWS SQS Plugin](#) was written (and still maintained) by [Markus Pfeiffer](#) of M-Way Solutions GmbH.
