

Rigor Optimization Plugin

Plugin Information

View Rigor Optimization Website Performance Testing [on the plugin site](#) for more information.

Test website performance as a Jenkins build step using [Rigor Optimization](#) (Application [login](#))

Features

- Launch performance scans of your website as a distinct build step using Rigor Optimization
 - Launch multiple performance tests in parallel
- Optionally fail the build based on any of the following criteria:
 - Number of critical performance defects rises above a threshold
 - Performance score falls below a threshold
 - Specific performance defects found
- Configure test timeout and build failure behavior
- Tags build details directly inside Rigor Optimization so you can easily cross reference failures

Requirements

- Requires a paid license to the Rigor Optimization application, [More Information](#)

Setup

Install plugin

Install this plugin via the Jenkins plugin manager.

Configure plugin

Create plugin using your [Rigor Optimization API Key](#). For more information, check out this [Knowledge Base Article](#)

Version history

Version 1.04 (May 7, 2019)

- Add failure on performance budgets option

Version 1.02 (September 13, 2016)

- Initial release
