

Date Parameter Plugin

Plugin Information

View Date Parameter [on the plugin site](#) for more information.

Summary

This plug-in provides Date parameters in two forms.

Requirements

Jenkins version 1.614 or newer is required. (jdk >= 7.0)

Configuration

Date Format

This is Java style date format.

- example1) yyyyMMdd
- example2) yyyy-MM-dd

Default Value

You can use two types value

Java coding style

This value support LocalDate, LocalDateTime. but allows only contains plusXXX, minusXXX methods. this value will apply '**Date Format**' when you build.

Semicolon is not mandatory.

- example1) `LocalDate.now();`
- example2) `LocalDateTime.now()`
- example3) `LocalDate.now().plusDays(5).minusMonths(1);`

String style

In this case. plugin will validate this value to '**Date Format**'

- example1) 2018-05-01
- example2) 01/05/2018

Screenshot

LocalDate style.

Discard Old Builds

This build is parameterized

Date Parameter

Name	yesterday
