Use Proxmox virtual machines as slaves in Jenkins

## Description

This plugin allows the use of Proxmox virtual machines as slaves in Jenkins.

## Limitations

- Only Qemu virtual machines supported (at the moment).
- No option to avoid rolling back to a snapshot on slave start up.
- No checking on virtual machine ready state/errors during rollback.

## Configuration

### Datacenter cloud

To add a new Proxmox datacenter cloud, click on "Manage Jenkins" then "Configure System". In the "Cloud" section click "Add cloud" and select "Datacenter".

### Virtual machine slaves

To add slaves click on "Manage Jenkins" then "Manage Nodes". Select the node type "Slave virtual machine running on a Proxmox datacenter." and enter a name for the node.

## Change Log

### Version 0.2.1 (2013-09-11)

- Fixed authentication timeout bug

### Version 0.2 (2013-09-05)

- Initial release
