

# Runscope Plugin

## Plugin Information

View Runscope [on the plugin site](#) for more information.

This plugin allows you to add a [Runscope](#) API test as a build step into your Jenkins build pipeline. The plugin will trigger a specific API test (via [Trigger URL](#)) and wait for the test to complete. If the test passes, the build steps will continue. However, if it fails, the build will be marked as failed.

## Changelog:

### v1.0

- First release.

### v1.4

- Changed the way HTTP request/response is handled (addressing issue with larger test result detail payloads)
- Wrested with maven / release procedures.. thus, 1.4.

### v1.46

- Fixed issue with non-200 OK status codes returned by the Runscope API

### v1.47

- Fixed issue with non-201 status codes returned by the Runscope API
