

Elasticsearch Query Plugin

Plugin Information

View Elasticsearch Query [on the plugin site](#) for more information.

Fails a build based upon an [elasticsearch](#) query

About this plugin

This came from a need to alert based on data stored on in elastic search; in particular logstash data. ELK users who also use Jenkins now have FOSS capabilities similar to that of [watcher](#) or [splunk](#).

Configuration

Once elastic search query plugin is installed the configuration has two parts.

Global:

Elastic Search Query Builder	
Host (required)	<input type="text"/> ?
Indexes	<input type="text"/> ?
User	<input type="text"/> ?
Password	<input type="text"/> ?
SSL	<input type="checkbox"/> ?
	Check to use https when querying elastic search
Query Request Timeout	<input type="text" value="120000"/> ?

Host is the only required field.

Job:

Elasticsearch Query	
All fields are required	
query	<input type="text"/> ? Please set a query
Fail when	<input type="text" value="gte"/> ?
threshold	<input type="text"/> ? Please set a threshold greater than or equal to 0
since	<input type="text"/> ? Please set a since value greater than 0
time units	<input type="text" value="MINUTES"/> ?
<input type="button" value="Delete"/>	

All fields are required.

Change Log

Version 1.2 (Dec 13, 2015)

- updated messaging and improved validation stemming from writing wiki page

Version 1.1 (Dec 13, 2015)

- Initial commit
