Seed Plugin

Plugin Information
View Seed Jenkins on the plugin site for more information.

The Seed project aims to help automating the generation and management of pipelines for branches of a project in Jenkins.

Documentation

- Documentation is available on the Seed Wiki.
- JUC 2015 London presentation
- BruJUG June 2016 presentation

Contributing

- Issues are managed in GitHub
- Developing the Seed plug-in is documented in the Wiki

Change log

2.1.4

- #30 Fix for Project seed job has null in Branch start name and Branch name

2.1.3

- #27 - Customisation of path to the seed file
- #29 - Correction of regression

1.1.0

- Depends on Job DSL 1.50

2.1.0

- Depends on Job DSL 1.50

2.0.0

- Dropping the support for version 0.x
- Version 1.x will be maintained until end of 2016

1.0.0

- Simpler, better documented - try the new Seed plug-in 1.0
    - Documentation
    - Migration from 0.x (backward compatible)
- Depends on Job DSL 1.46 or more recent
- Depends on Jenkins 1.625.3 or more recent
- Depends on Cloudbees Folder 5.11 or more recent
- Depends on Matrix Authorization Strategy Plugin 1.4 or more recent

0.20.0

- #23 Ignoring tag related messages from BitBucket

0.19.0

- #18 Delete workspaces in case of pipeline deletion
- #20 Branch Jobs generated incorrectly
- #22 Generation of a destructor job to delete branches

0.18.0

- [#19](#) Support for [BitBucket Cloud web hooks](#)

0.17.0

- [#17](#) Project configuration is now [cached](#) after generation - this allows to trigger events correctly when a project was generated with a class given as a parameter
- **In order to benefit from the cache, a project and active branch seeds must be regenerated**

0.16.0

- Updated [documentation](#) of the configuration parameters
- Introduced the **pipeline-start-auto** configuration parameter to disable the pipeline to start automatically upon pipeline generation

0.15.0

- [#13](#) Support credentials for the repository containing the pipeline libraries

0.14.2 & 0.14.3

- [#14](#) Webhook problem "Cannot find job in path with name"

0.14.1

- Added more traces in case of error like a job not being found

0.14.0

- [#12](#) - using a shell script instead of a Gradle step to launch to resolution of pipeline libraries

0.13.0

- [#11](#) - the computed SEED_BRANCH variable didn't escape the / character for custom naming strategies, causing issues with Git-based projects
- [#8](#) - Auto refresh when using a version range for pipeline libraries

0.12.0

- [#6](#) - Github trigger: one seed definition change must trigger the seed event

0.11.2

- [#4](#) - Support for [pipeline name different than branch path](#) - correction

0.11.1

- [#2](#) - Allow extensions on the project generator

0.11.0

- [#4](#) - Support for [pipeline name different than branch path](#) - regression fixed in 0.11.2
- [#3](#) - Support for [additional parameters](#)

0.10.0

- [#1](#) - correction for the declaration of dependencies

0.9.0

- Technical release to enable automated publication of the release from the [build](#)

0.8.0

- Initial published version
