

CloudBees Docker Hub Notification

Plugin Information

View CloudBees Docker Hub/Registry Notification [on the plugin site](#) for more information.

This plugin provides integration between Jenkins and Docker Hub, utilizing a Docker Hub hook to trigger one (or more) Jenkins job(s). This allows you to implement continuous delivery pipelines based on Docker in Jenkins.

Upon receiving a notification of an updated image as web-hook from Docker Hub, Jenkins will trigger all jobs that have the Docker Hub trigger enabled that also use the Docker image as part of the build. A Docker Hub Pull build step is provided to retrieve the latest image from Hub.

Configuration

For configuration of this plugin see [README.md](#)

Version History

For changes version changes in this plugin see [CHANGES.md](#)
